

FSCO Monthly Surveillance & Verification Report

Establishment: Tata’s Chicks

Lead Auditor/FSCO: Jake-Edwards L. Yboa

Audit Date: April 30, 2026

1. Executive Summary

Objective: This report summarizes the technical findings of the random surveillance audit conducted on April 30, 2026. This session served to verify the active implementation of the **FSMS Master Manual** modules and the transition to the **Audit Form**.

Current Compliance Status: The establishment achieved an official audit score of **63.6%**, receiving a rating of **"Needs Improvement"**. This reflects a decline from the April 16 baseline (**78.8%**), primarily due to significant regressions in documentation and the inability to maintain thermal limits without the required physical resources.

Administrative Breakdown & Miscommunication:

The audit identifies a critical systemic failure in internal communication. The April 16 audit results and safety recommendations were sent to General Administration but were not forwarded to the **Operations Manager** or **Kitchen Head**. Consequently, Purchase Requests (PRs) for mandatory safety equipment were not made. This administrative gap is the primary root cause for the 26 deviations recorded today.

Key Verdict:

- **Onsite Refresher:** The FSCO provided immediate onsite training for duty staff on log-book requirements to mitigate the impact of the documentation gaps.
- **Mandatory Requirement:** Operations must procure the "Absent" safety equipment within 24 hours to stabilize the safety system.

2. FSMS Administration: Changelog (v34)

The following updates were delivered and implemented today to address emerging facility risks:

ID	Change Description	Basis for Update
1.11	Added: Personal Item Storage.	Observed staff water mugs inside food chillers.
3.9	Added: Raw Personal Ingredient Segregation.	Observed raw staff meat stored near RTE sauces.
5.16	Refined: General Facility Sanitation.	Added check for wall/ceiling oil drips (Fix for Finding 5.11).
